DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claims 1-36 drawn to a system, method, and article of manufacture for

modifying a model of a biological process responsive to experimental results generated

by an in situ experiment conducted on an experimental platform, classified in class 702,

subclass 019.

Group II: Claims 37-50 drawn to a method and article of manufacture for modifying a

model of a chemical reaction responsive to experimental results generated by an in situ

experiment conducted on an experimental platform, classified in class 702, subclass

019.

The inventions are distinct and divergent, each from the other because of the following reasons:

The inventions of Group I and Group II are unrelated if it can be shown that they are not

disclosed as capable of use together and they have different modes of operation, different

functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the

inventions of Group I and II have different modes of operation.

The invention of Group I is directed to a system, method, and article of manufacture for

modifying a model of a biological process responsive to experimental results generated by an in

situ experiment conducted on an experimental platform. The invention of Group II, however, is

directed to a method and article of manufacture for modifying a model of a chemical reaction

responsive to experimental results generated by an in situ experiment conducted on an

Application/Control Number: 10/783,522

Art Unit: 1631

experimental platform. In general, methods for modeling biological processes and chemical

Page 3

reactions rely upon biological and chemical data sets that are not co-extensive, as well as

distinct mathematical algorithms. Therefore, these methods utilize distinct techniques that are

separately classified and published. For these reasons Groups I and II have different modes of

operation. Therefore, the burden of search is maintained as the examination process requires a

search of non-patent literature, U.S. patent publications, U.S. patents, as well as foreign patent

literature.

Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art because of their recognized divergent subject matter, restriction for

examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).

CONCLUSION

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Pablo Whaley whose telephone number is (571)272-4425. The examiner

can normally be reached on 9:30am - 6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Andrew Wang can be reached at 571-272-0811. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
